Consider the following transfer function. To compute the response of this system to an arbitrary input signal, provide with a vector of the times t at which you want to compute the response and a vector u containing the corresponding signal values. For example, the following code plots the response of sys1 as a yellow dotted line and the response of sys2 as a green dashed line:lsim(sys1,'y-',sys2,'g-',u,t,x0) For more information about configuring the PlotStyle argument, see Specify Line Style, Color, and Markers in the MATLAB[®]A documentation.y = lsim() returns the system response y, sampled at the same times as the input (t). If dt is too large (undersampling), lsim issues a warning suggesting that you use a more appropriate sample time, but will use the specified sample time. See Algorithms for a discussion of sample times.lsim(sys,u,t,x0) further specifies an initial condition x0 for the system states. No plot is drawn on the screen. The characters can appear in any order. For more information about working with this GUI, see Working with the Linear Simulation Tool. When invoked without left-hand arguments, lsim plots the response on the screen.lsim(sys,u,t) produces a plot of the time response of the dynamic system model sys to the input history, t,u. For instance, if sys is a SISO system, then u is a t-by-1 vector. Specify method as one of the following values:'zoh' eĀĀĀ Use zero-order hold'foh' eĀĀĀ Use linear interpolation (first-order hold)If you do not specify a method, lsim selects the interpolation method automatically based on the smoothness of the signal u.lsim(sys1,...,sysn,u,t) simulates the responses of several dynamic system models to the same input history t,u and plots these responses on a single figure. In continuous time, the time sampling dt = t(2)-t(1) is used to discretize the continuous model. The plot displays both the applied signal and the response.Simulate Response of Identified ModelSimulate the response of an identified linear model using the same input signal as the one used for estimation and the .tolp .tolp on ametsis od atsopser sad amu adac ed roc e rodacram .ahnil ed olitse o acifcepse]t,u.NelytStolP,NSys,...,elytStolP,]sys(misl.sledom soirjĀv ed atsopser sa raluclac on adartne ed odot©ĀM e OX sotnemugra so rasu edop m©Ābmat ⁹Ācov .adartsomabus ofĀsrev an otluco]atse euq oir⁹Ātalicsō otnematropmoc etrof ebixe atsopser atsE]st,su,dh(misl ;]td,h(d2c = dh .;]5,0 =>]1,sl(mer(= su ;5:td:0 = st ;610,0 = td:odadnemocer megartsoma ed opmet o odnasu]s(H oziterscid ,atsopser asse rarohelem araP .OMIM uo OSIS .otercsid uo ounĀtnoc res edop sys oledom O.ocifjĀrg on ecerapa m©Ābmat u lanis O .odalumis atsopser ed ocifjĀrg o arap edarg a euqil e sotunim arap opmet ed sedadinu sa edum ,olpmexe etse araP .]sadtardauq sadno uo sostup omoc sounĀtnocsed sianis arap 'hozā e sevasu adartne ed sianis arap odasu ©Ā 'hofā('hofā uo 'hozā odot©ĀM o odnasu d2c moc sodazitercsid ofĀs ounĀtnoc opmet ed sametsis sO snart(ortlif uo]sodatse ed ošĀapse(ritil moc sodalumis ofĀs otercsid opmet ed sametsiSĀa ospaloc)'odalumiSā,odideMā(dneqel)'rā,y,t,'kā,ataDtuptuO,z,t(tolp.ataDtuptuO,z adidem atsopser a moc y adalumis atsopser a erapmoc ;)0x]l .ataDtupnĀz .sys(misl = x,t,y ;)4,z(dis4n =]0x,sys(;)'rotom-CDā,'emaNā,1,0,u,y(ataddi = z ;)')'atadrotomcdā,'atadā,'someddiā,'tnediā,'xoblotā,toorbaltam(elifluf(daol.ofĀšĀamitse ed odnamoc olep sodanroter sodatse so
